

# M81 Igniter

**UDC USA, Inc. produces the M81 Igniter for the U.S. Army, Marines, and Department of Commerce approved International customers. UDC is the only active producer of the M81 Igniter in the world.**

**NAME:** M81, Igniter Time Blasting Fuze

**FUNCTION:** M81 Igniter is designed to work with M700 Time Fuze or Shock Tube to create an explosive train for mines, demolitions or training activities. To ignite, remove the safety pin and then pull the ring. This creates spring tension and when released the firing pin will strike will set off the primer. The primer then ignites the shock tube which is secured in the end of the igniter. A blasting cap is crimped onto the far end of the shock tube and place into the explosive or mine to be initiated.

**APPEARANCE:** Olive Drab polymer tube with shipping plug and weatherproofing plug on one end. Cotter pin and pull ring on the other end.

**SHIPPING:** 1.4 S, UN0131
